

<b>Course Description</b>					
<b>Name</b>	<b>Code</b>	<b>Semester</b>	<b>T+A Hour</b>	<b>Credit</b>	<b>ECTS</b>
AN INTRODUCTION to FORMAL LANG. and AUTO. THEORY	COE4167890	Fall Semester	3+0	3	6
<b>Prerequisites Courses</b>	AYRIK MATEMATİK; PROGRAMLAMAYA GİRİŞ				
<b>Recommended Elective Courses</b>	Discrete mathematics				
<b>Language of Instruction</b>	English				
<b>Course Level</b>	First Cycle (Bachelor's Degree)				
<b>Course Type</b>	Required				
<b>Course Coordinator</b>	Assist.Prof. Cihan Bilge KAYASANDIK				
<b>Name of Lecturer(s)</b>	Assist.Prof. Cihan Bilge KAYASANDIK				
<b>Assistant(s)</b>					
<b>Aim</b>	This course aims to introduce concepts in Automata theory. Based on topics on identifying the different formal language classes, their relationship and differences. Students are supposed to design theoretic machines for specific purposes, and prove/disprove properties of these machines.				
<b>Course Content</b>	This course contains; Course Info, Introduction to Finite State Automata ,Deterministic and Nondeterministic Finite State Automata ,Equivalence of deterministic and nondeterministic Automata ,Regular Expression and Algebraic Laws for Regular expression ,Pumping Lemma for Regular Languages and Minimization of finite ,Context Free Grammars and ,Context Free Grammars and languages ,Parse Trees and Ambiguity of grammar ,Pushdown Automata ,Chomsky Normal Form ,Pumping Lemma for Context Free languages ,Turing Machines				
<b>Course Learning Outcomes</b>		<b>Teaching Methods</b>	<b>Assessment Methods</b>		
Identify different classes of languages and design automaton to accept that language □□□□□		1, 14, 15, 18, 2, 22, 3, 4, 5	A, E		
Prove or disprove if the given language is regular, proving equivalence of different automata □□□□□□		1, 14, 15, 18, 2, 22, 3, 4, 5	A, E		
Represent a given language by a context-free grammar, removing ambiguity, and simplification of a given grammar. □□□□□□□□		1, 14, 15, 18, 2, 22, 3, 4, 5	A, E		
Desing a Turing machine for a certain purpose. □□		1, 10, 14, 15, 18, 2, 22, 3, 4, 5	A, E		
<b>Teaching Methods</b>	1: Lecture, 10: Brainstorming, 14: Self-Study, 15: Problem solving, 18: Case Study, 2: Question - Answer, 22: -, 3: Discussion, 4: Exercise, Practice, 5: Demonstration				
<b>Assessment Methods</b>	A: Written Exam, E: Quiz				
<b>Lecture Schedule</b>					
<b>Sequenc e</b>	<b>Topics</b>	<b>Preliminary Preparation</b>			
1	Course Info, Introduction to Finite State Automata □□□□				
2	Deterministic and Nondeterministic Finite State Automata □□□□□				
3	Equivalence of deterministic and nondeterministic Automata □□□□□				
4	Regular Expression and Algebraic Laws for Regular expression □□□□□				
5	Pumping Lemma for Regular Languages and Minimization of finite state automata □				
6	Context Free Grammars and languages □□□□				
8	Context Free Grammars and languages □□□□				
9	Parse Trees and Ambiguity of grammar □□□□				
10	Pushdown Automata □□				
11	Chomsky Normal Form □□				
12	Pumping Lemma for Context Free languages □□□□				
13	Turing Machines □□				
<b>Evaluation Methods</b>		<b>Weight(%)</b>			
Midterm Exam		30			
General Exam		70			

**Resources**

Lecture notes will be supplied by instructor but following textbooks could be used as supplementary materials. 1. J. Hopcroft, R. Motwani, and J. Ullman. Introduction to Automata Theory, Languages, and Computation, 3rd edition, 2007, Pearson/Addison-Wesley, 2. Theory of Automata By C.J. Martin
