

**School of Engineering and Natural Sciences / Computer Engineering (English)**

**2022 - 2023 Academic Year**

**DATA STRUCTURES**

**Syllabus**

<b>Course Description</b>					
<b>Name</b>	<b>Code</b>	<b>Semester</b>	<b>T+A Hour</b>	<b>Credit</b>	<b>ECTS</b>
DATA STRUCTURES	COE2233850	Spring Semester	3+2	4	8
<b>Prerequisites Courses</b>	PROGRAMLAMAYA GİRİŞ				
<b>Recommended Elective Courses</b>	Data Communication and Networking, Object Oriented Programming and Discrete Math				
<b>Language of Instruction</b>	English				
<b>Course Level</b>	First Cycle (Bachelor's Degree)				
<b>Course Type</b>	Required				
<b>Course Coordinator</b>	Prof.Dr. Mehmet Kemal ÖZDEMİR				
<b>Name of Lecturer(s)</b>	Prof.Dr. Mehmet Kemal ÖZDEMİR				
<b>Assistant(s)</b>					
<b>Aim</b>	This course aims to teach how to organize data in a computer so that it can be used for designing efficient algorithms to solve various types of problems. Topics covered include arrays, lists, stacks, queues, trees, heaps, graphs and the use of these data structures for searching, sorting, selection and other related applications. C Programming language will be used for the implementation of data-structures.				
<b>Course Content</b>	This course contains; Introduction to data structures and algorithms; Introduction to Basics of C, Functions, Arrays, and Pointers, Strings, Structs, and Memory Allocation, Algorithm analysis and complexity notations, Fundamental data structures: Linked Lists, Abstract data types: Stack, Abstract data types: Queues, Trees and Binary Search Trees, Efficient Binary Trees and Multi-way Search Trees, Priority Queues and Heaps, Graphs, Searching and Sorting, Hashing and Collision, Files and Their Organization.				
<b>Course Learning Outcomes</b>		<b>Teaching Methods</b>		<b>Assessment Methods</b>	
1. Student can explain basic principles of algorithm analysis.		1, 15, 4, 9		A	
2. Student can analyze the accuracy, complexity and efficiency of an algorithmic solution.		1, 13, 16, 4, 9		A, D	
3. Student can apply basic data structures, such as arrays, lists, stacks and queues, to algorithmic design		1, 13, 15, 16, 4, 9		A, D	
4. Student can define tree, binary tree, heap, hash tables, and graph data structures and use them in problem solutions		1, 13, 15, 4		A	
5. Student can choose the right data type for efficient solution of a problem.		1, 13, 15, 16, 4		D	
<b>Teaching Methods</b>	1: Lecture, 13: Experiment / Laboratory, 15: Problem solving, 16: Project Based Learning, 4: Exercise, Practice, 9: Simulation				
<b>Assessment Methods</b>	A: Written Exam, D: Project / Design				
<b>Lecture Schedule</b>					
<b>Sequence</b>	<b>Topics</b>	<b>Preliminary Preparation</b>			
1	Introduction to data structures and algorithms; Introduction to Basics of C	Book Chapter 1, Lecture Slides 1			
2	Functions, Arrays, and Pointers	Book Chapter 1 and 3, Lecture Slides 2			
3	Strings, Structs, and Memory Allocation	Book Chapter 4 ve 5, Lecture Slides 3			
4	Algorithm analysis and complexity notations	Book Chapter 2, Lecture Slides 4			
5	Fundamental data structures: Linked Lists	Book Chapter 6, Lecture Slides 4			
6	Abstract data types: Stack	Book Chapter 7, Lecture Slides 6			
7	Abstract data types: Queues	Book Chapter 8, Lecture Slides 7			
8	Trees and Binary Search Trees	Book Chapter 9, Lecture Slides 8			
9	Efficient Binary Trees and Multi-way Search Trees	Book Chapter 10-11, Lecture Slides 9			
10	Priority Queues and Heaps	Book Chapter 12, Lecture Slides 10			
11	Graphs	Book Chapter 13, Lecture Slides 11			
12	Searching and Sorting	Book Chapter 14, Lecture Slides 12			
13	Hashing and Collision	Book Chapter 15, Lecture Slides 13			
14	Files and Their Organization	Book Chapter 16, Lecture Slides 14			
<b>Evaluation Methods</b>		<b>Weight(%)</b>			
Midterm Exam		30			
General Exam		70
